

## 2. Question:

### Smartphone/Watch Application

Implement a smartwatch/smartphone application using existing speech services/image services (e.g., IBM Alchemyapi, Face++) related to your project.

## Description:

I developed a smartphone application using IBM Alchemy API to recognize the image.

It's inside the Alchemy API android SDK.

## Screenshots:

When the user chooses one image, and click “classify image”, AlchemyAPI could analyze the image and provide the tags. (e.g. it successfully recognized the cat image)
